

verifying an identity of the transaction requester;

communicating a first transaction code to a wireless communication device;

displaying the first transaction code on a visual display of the wireless communication device;

optically scanning the first transaction code from the visual display; and

receiving, by the transaction management system, a decoded representation of the first transaction code in response to optically scanning the first transaction code.

11 ~~13~~¹² (amended) The method of claim 1, further comprising:

receiving, by the transaction management system, a first fulfillment verification after

optically scanning the first transaction code.

~~18~~¹⁷ ~~20~~ (amended) The method of claim ~~19~~¹⁷ wherein verifying the first transaction code includes

decoding, by a transaction fulfillment system, the first transaction code and communicating a

decoded representation of the first transaction code to the transaction management system.

~~24~~²⁵ ~~26~~ (amended) The method of claim ~~27~~²⁵, further comprising:

communicating a fulfillment verification to the transaction management system in

response to verifying the second transaction code.

~~29~~²⁷ ~~31~~ (amended) The method of claim ~~29~~²⁷ wherein communicating the transaction message

includes communicating the transaction message from a transaction fulfillment system.

~~32~~³² ~~34~~ (amended) A system for facilitating a wireless transaction, comprising:

a transaction management system capable of:

receiving a transaction request from a transaction requester;

verifying an identity of the transaction requester;

communicating a first transaction code to a wireless communication device; and

a transaction fulfillment system coupled to the transaction management system capable of optically scanning the transaction code from a visual display of the wireless communication device.

41. (amended) The system of claim ³²44 wherein the transaction fulfillment system includes a code scanning device.

42. (amended) The system of claim ⁴¹45 wherein the code scanning device includes a bar code reader.

43. (amended) The system of claim ³²46 wherein the transaction fulfillment system is capable of decoding the transaction code in response to optically scanning the transaction code.

44. (amended) The system of claim ³²47 wherein the transaction fulfillment system and the wireless communication device each include a radio transceiver for enabling communication directly between the wireless communication device and the transaction fulfillment system.

[Please add the following new claims:

51. A method for facilitating a wireless transaction, comprising:

receiving, by a transaction management system, a transaction request from a transaction requester;

verifying an identity of the transaction requester, including authenticating a spoken authentication code received by the transaction management system from a wireless communication device; and

communicating a first transaction code to said wireless communication device.

AR 44/ 52. A method for facilitating a wireless transaction, comprising:

receiving, by a transaction management system, a transaction request from a transaction requester;

verifying an identity of the transaction requester; and

communicating a first transaction code to a wireless communication device;

displaying the first transaction code on a visual display of the wireless communication device;

optically scanning the first transaction code from the visual display;

receiving, by the transaction management system, a first fulfillment verification after optically scanning the first transaction code;

communicating a second transaction code to the wireless communication device after receiving the first fulfillment verification; and

optically scanning the second transaction code from a visual display of the wireless communication device.

53. A method for facilitating a wireless transaction, comprising:

receiving, by a transaction management system, a transaction request from a transaction requester;

verifying an identity of the transaction requester;

communicating a first transaction code to a wireless communication device;

verifying the first transaction code; and

communicating a second transaction code from the transaction management system to the wireless communication device after verifying the first transaction code.

54. A method for facilitating a wireless transaction, comprising:

receiving, by a transaction management system, a transaction request from a transaction requester;

verifying an identity of the transaction requester;

communicating a first transaction code to a wireless communication device;

verifying the first transaction code;

communicating a second transaction code to the wireless communication device after verifying the first transaction code;

verifying the second transaction code; and

communicating a transaction message to the wireless communication device after verifying the second transaction code.
